

OPERATION

The Magne-Sonic Model MS-100 series Liquid Level Switch is a compact integral ultrasonic gap switch with all 316-SST or Teflon Wetted parts.

It uses proven ultrasonic technology to operate in virtually any liquid regardless of viscosity. The MS-100 utilizes a gap sensor with internal piezoelectric crystals to transmit and receive an ultrasonic signal. When liquid is present the ultrasonic signal is transmitted across the "gap" and sensed by the receiving crystal which in turn generates an electrical signal. The electronic module detects this change and produces a change in the DPDT output relay state or 4 mA dry, 20 mA wet output.

The MS-100 consist of a 316-SST or Teflon sensor and an integral miniturized, encapsulated electronics which is mounted in a cast aluminum, Explosion Proof, NEMA 4X enclosure.

MAGNE-SONICS® MS 100 Ultrasonic gap Liquid Level Switch

FEATURES

- No moving parts
- Epoxy painted enclosure
- DPDT relay, Fail Safe High
- No calibration
- Encapsulated electronics
- Cl.I, Div. 1 & 2, GRP C & D
- Cl.II, Div. 1 & 2, GRP E,F,&G

SPECIFICATIONS

Power Supply: 115 or 230 VAC

24 VDC

Output: DPDT 10 AMP

Two wire 4-20 mA

Repeatability: 2mm typical

Delay (On): 0.5 seconds (standard)
Temperature: Sensor -40°F to 300° F

Electronics -20°F to 170° F

Operating Pressure: 316-SST 1000 PSIG

Teflon 100 PSIG

Connection: 3/4" NPT

Enclosure: Epoxy Coated

NEMA 4X & 7

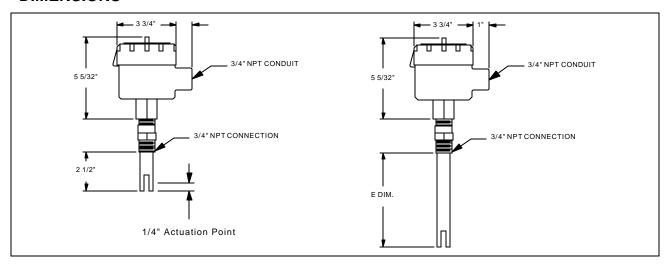

Mounting: Integral or Remote Approvals: FM/CSA Pending
